

TELL ENERGY NO GAS PLANT!

IT'S TOO COSTLY

Gas fired peaking plants, like the ones Energy wants to build, are among the most expensive ways to generate energy.

IT WON'T MAKE US SAFER

It's vulnerable to storms and is out of sync with modern disaster resilience strategies.

WE DON'T NEED IT

It's too much power.
Power we won't use
from a plant that will be
sitting idle

OUR OUTAGES WON'T GO AWAY

This power plant won't fix our failing distribution system or the years of neglect which directly cause 99% of our 2000+ power outages each year.

ENERGY IS INFLATING ALL THE NUMBERS

- It will only create 13 full time jobs
- We don't need this much power
- Buying power from the regional marketplace is much more affordable

IT'S TARGETED

NO East residents don't deserve to inhale 2,000,000 pounds of toxic pollution!
In addition, this plant will cause flooding and damage to our levees.

WE DESERVE BETTER

WE WANT ENERGY EFFICIENCY

Eliminating energy waste is the cheapest and best way to meet our energy needs.

WE WANT CHEAPER OPTIONS

New Orleans is already heavily dependent on the volatile pricing of natural gas power, while renewables pricing continues to decrease

WE WANT TRANSMISSION UPGRADES

Future reliability and storm event concerns can be addressed with transmission upgrades and will prove to be a more effective and economically prudent solution.

WE WANT TRANSPARENCY

These plants were selected FOR us behind closed doors. Without thought to the cost to ratepayers or impact on the community.

Entergy has proposed an outdated power plant that is the energy equivalent of installing telephone land lines. It's outdated and expensive.

We deserve a brighter energy future!
